

Software Engineering Project: Assessment 2

Gandhi-Inc. - Project Blind Eye

Implementation Report

Following the specified requirements for Assessment 2 (found in “Appendix_1.pdf”, included in the submitted file), many features found in the original requirements document [1] are not yet to be implemented. Therefore, such document was updated in order to provide a more accurate statement of requirements for Assessment 2 [2].

Referring to this new statement, all of the features necessary for a complete implementation of the requirements found in the aforementioned appendix have been successfully implemented in the current version of our product. Therefore, all the remaining implementation components necessary for the completion of our product are only necessary for future deadlines/assessments.

However, some remarks need to be made with regards to the requirements listed on the new statement:

- 2.7: While we have provided documentation, it is not yet final as the software is not complete.
- 3.1.0: The current map of the university may not be final.
- 3.2.3: Currently, the roboticons do not have a set of three values, since the “Food” resource is not yet to be included in the game. However, they do have a set of two values, related to the “Ore” and “Energy” resources.

For further iterations of our implementation, we will continue to use our requirements documentation in order to add the remaining features, while updating it accordingly.
